Course description: Independent research under the advisor’s direct supervision.

Course objectives: At the end of this course, the students will have 1) enhanced their ability to design, perform and analyze research experiments, or 2) obtained experimental results that may be used in their Master thesis or Doctoral dissertation, and lead to publications, or 3) expanded their knowledge in the field of study, or 4) practiced their oral and written presentation skills.

Course content and structure: students will conduct original independent research on individual projects chosen in accordance with their advisor’s research objectives.

Learning outcomes: Learning outcomes parallel the course objectives stated above.

Evaluation of learning outcomes: Evaluation of learning is carried out by interaction with the instructor (advisor) as the research proceeds during the semester. Letter grades are assigned according to the instructor’s evaluation of student’s performance.
